How to install SajiOS ??

SajiOS is developed using Flash Lite 2.0 and Python technology. Therefore one needs to install Pys60(Must Be Version 1.4.5) and Flash Lite 2.0 or higher (Many phones like N95, N78, N79 have built in Flash Lite 2.0 or 3.0 , therefore these phones doesnt require any flash lite update). Moreover, SajiOS must be signed with all capabilities from www.symbiansigned.com to work properly.

Please Read FAQ AT END OF HELP FILE

How to change icons??

Adding new icons is quite simple. Just, launch Icon Manager from SajiOS's startmenu. Suppose we have to add an icon no 7 to the desktop .Then open icon manager go to desktop icons > icon 7 .Then we will see icon 7 image , icon 7 app & delete icon 7.what these option are ? Actually, icon 7 image means the image of the icon and clicking it open the icon app , select any icon image and press ok. Then click on icon 7 app and it automatically displays all installed apps , select any app to which that icon points when u click it in the desktop. delete icon 7 means deleting the icon simply.

How I Numbered The Icons??

Numbering of icons is same as in previous releases. Let me describe it again :

Desktop icons

Submenu apps

Startmenu Shortcuts

How To change Themes/Wallpapers In SajiOS ?

Run SajiOS , go to control panel then desktop and then select browse button in front of themes to list available themes .Select any theme , press the OK button and return to the desktop. That's it. Same is the case with wallpapers. Don't forget to visit www.sajisoft.50webs.com , I will surely update new themes there every week .

How To Disable/Enable Red Key in SajiOS ?

You can enable/disable red from SajiOS control panel.

How To Make Your Own Icon And Wallpaper?

Flash lite does not support .png or .ico files.It only support .swf files. So, you have to create your own icon in .swf file..You Can easily create your own icons if you have Macromedia Flash , Swish Max or any Flash development tool. In which you can import your transparent .png image and export it as .swf image...Now, what should be the characteristics of icon :

- It Should Be 32x32

- Its size must be less than or equal to 2kb...

And in case of wallpapers, do the same procedure but this time.

- Wallpaper size must be 240x320.

- Wallpaper must be less then equal to 9 kb.

You can decrease the size of wallpaper or icons while exporting them to swf file.

And after making your own icon place it in e:\others\sajios\icons and then edit ssdata.txt and write its name there and if u create your own wallpaper then copy it to e:\others\sajios\wallpapers and by using SajiOS control panel enter its name and press ok.

How To Make Your Own Themes?

One of the best feature of SajiOS is its skinability. I m busy in adding features but from now I will try to make new themes & I am writing a skin guide soon . But u must have to be a developer of flash to make themes . After completing my guide , I will publish it and then you can make your own themes . Upto now I will make themes 4 u. And try to provide you best.

FAQ

Q. SajiOS is not launching from the menu icon ??

A. Because of your python runtimes is not working. (SajiOS works only with phone memory) .

Q. SajiOS launches and said System Error -2 ?

A. Because of the Signing issue .You must have to sign the SajiOS with all capabilities.

Tips

NEVER KILL SAJIOS. Always , shutdown SajiOS from start menu otherwise some part of SajiOS keeps running in the memory until you restart the device.

If you like to say me Thanks or you need any kind of help .Please email me at sajisoft@gmail.com . I will try my best to solve your problems .
